The TexPREP program is an agreement between South Texas College, The University of Texas at San Antonio and participating school districts which offers an academically intense, mathematics-based summer program stressing the development of abstract reasoning and problem solving skills.

The purpose of the program is to identify achieving middle and high school students with an interest in science, technology, engineering and other mathematics-related areas and to increase their potential for careers in these fields. The mathematics-based program, approximately seven weeks in length, is presented over the course of four summers to students in the seventh through the tenth grades.
